# Create a query that lists each movie, the film category it is classified in, and the number of times it has been rented out.

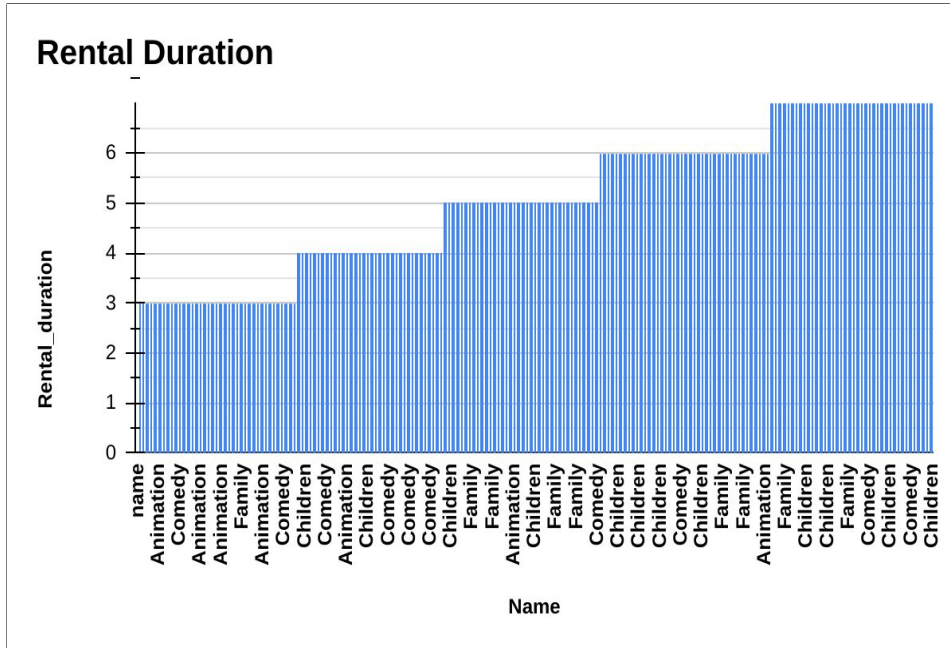

rental_count vs. category_name

We are counting the number of movie rentals based on movie category.

X-axis title =category_name

Y-axis title = rental_count

Write a query to display rental_duration based on movie category(name).

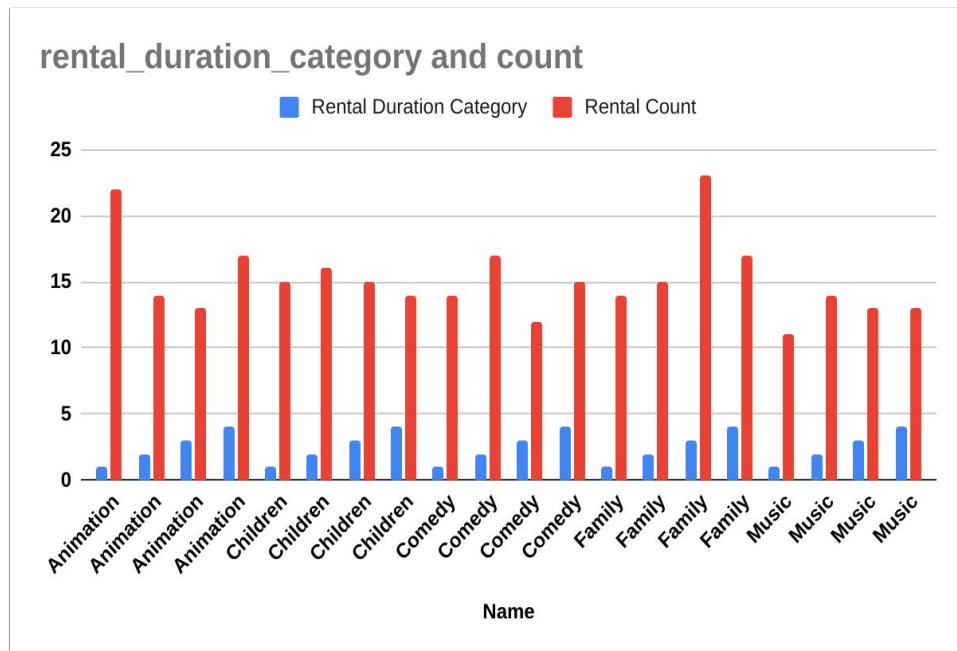

Rental Duration

We are grouping the names by rental duration

X-axis title = Name

Y-axis title = Reantal_duration

Display rental duration category and rental count based on movie category

rental_duration_category and count
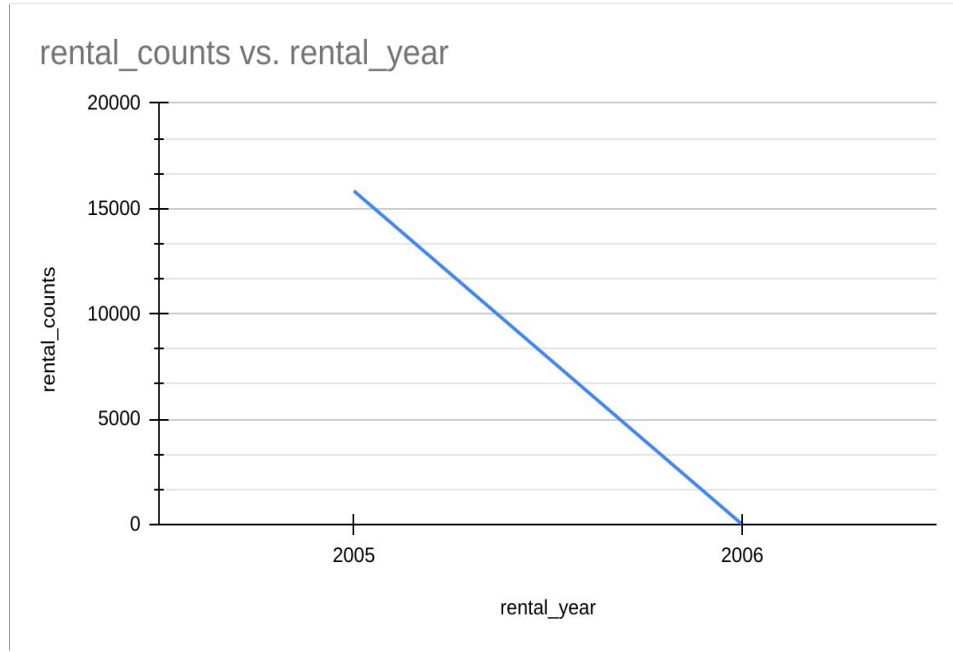

■ Rental Duration Category　■ Rental Count

Here we are calculating the rental count according the category of the movies and based on rental duration

X-axis label = name

Y-axis label = Rental Duration Category,Rental Count

Display rental counts based on rental year

rental_counts vs. rental_year

We are visualising the data of rental count according to rental years.

X-axis title = rental_year

Y-axis title = rental_count
